

AP304 ADDRESSABLE FIRE ALARM CONTROL PANEL

S3

SOLUTION 3

REDBAN AP304 Addressable Fire Alarm Panel is a high specification intelligent addressable control panel which is working on RAAP protocol.

These panels combine sophisticated functionality with simple operation and an aesthetically pleasing design and suitable for surface or recessed mounting with metal case. This panel comes with a modular design and can be supplied in 1, 2 and 4 loop versions. Each loop can supervise 250 devices. In total 1000 devices can be controlled by the panel. AP304 has a networkable structure. In this way, 32 panels can be networked each other.

The user interface has 128x64 graphic LCD display, function buttons and indicator LEDs. On the device, there are separate indicator LEDs for 32 different zones; Trouble LEDs, Sound and Alarm indicators, Power, Ready, By-pass indicator LEDs as described in EN54-2/4 European Norm. All the system conditions are displayed on the central via separate indicator LEDs as well. The central supervises system troubles, conditions and displays to the user. By the Reset, Alarm, Cancel Alarm, Silence, Test and Evacuate buttons, user can perform simply the system functions. The general system indicators: Power, Ready, Prealarm, Fire Alarm, Cancel Alarm, Silence and Evacuate indicator LEDs are displayed on the left hand of central and the Trouble indicator LEDs are AC Loss, Battery Error and Siren. Error are displayed in the right hand on the central.

The REDBAN AP304 Addressable Fire Alarm Panel is an interactive digital addressable fire detection and alarm system ideally suited for small and medium sized buildings such as residential buildings, shops, hotels, warehouses and offices.

The control panel is designed, manufactured and tested to fully meet the requirements of EN 54 part 2 and part 4. Especially designed PY100 software is available for configuring the panel and can be downloaded / uploaded to the system via onboard USB connection.

Simple and flexible installation, commissioning, configuring makes Redban systems the preferred fire alarm system. User-friendly programming and robust operation are the goals of AP304.

Features

- Available in 1-4 loop versions
- Robust and aesthetic Metal Case
- 32 panels can be networked each other
- Programmable 250 zones/32 zone LEDs
- 128x64 LCD screen
- 20 character zone & device names
- Intelligent addressable RAAP protocol
- Configuration and control software
- User friendly programming
- Flexible scenario
- Onboard USB & 2 RS485 interface
- Day&Night mode delays per zone
- Turkish & English language
- Real time clock
- 65000 Event log with time stamp
- EN54-2 & EN54-4 Certified

Certificates:

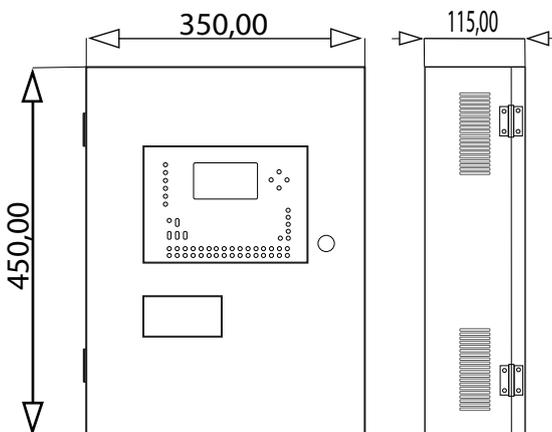

Top Techno Fire & Safety Co. LLC

TECHNICAL SPECIFICATIONS

	AP304-1	AP304-2	AP304-4
OPERATING VOLTAGE	180-240 Vac	180-240 Vac	180-240 Vac
POWER CONSUMPTION	100 Watt	100 Watt	100 Watt
NUMBER OF LOOP	1	1-2	1-4

KY200 Monitoring and Control Software

KY200 monitoring and control software is compatible with all redban panels. The sketch in the software is created in different ways depending on the project used. The connection between the panel and the computer is made via RS485. If there is a fiber optic substructure or TCP/IP substructure in the area where the system is installed, data transfer can be provided by these methods by using a converter. The software interface consists of 5 different windows. These are building top view, building front view, floor view, camera and data traffic list. These windows become active when an alarm occurs. If there is more than one building, the building top view shows which building an alarm occurred. The building front view shows which floor the alarm is located on. Floor view shows which area of the floor the alarm is located on. The area can be monitored instantly with a camera installed in that area. All alarms and errors occurring on the panel can be monitored from the data traffic list. These windows can be viewed separately on 5 different monitors, or they can be viewed by opening 5 windows on a single monitor.

PY100 Configuration Software

The configuration software is compatible with all redban panels. It is possible to edit all devices connected to the fire detection system with this software. The scenario is created by retrieval the data on the panel by the software, and then the edited data is loaded back into the panel. In this way, device names, exit assignments, creating virtual zones, etc. can be done more easily and quickly.
